

Week 3: System Administration and Cybersecurity

Security Awareness Training Outline

Deliverable 5 of 5

Programme	Tech Career Accelerator
Week	Week 3: System Administration and Cybersecurity
Date Range	1st - 5th June
Prepared by	Jodie S and Sisanda M
Document Version	1.0

Objective: Develop comprehensive security, backup, and risk management documentation.

1. Purpose

The purpose of security awareness training is to help employees recognise common threats, follow secure work practices, and report suspicious activity quickly.

2. Training Plan

Training Area	Learning Outcome	Delivery Method	Frequency
Phishing awareness	Employees can identify suspicious emails, links, attachments, and impersonation attempts.	Short presentation, real examples, and phishing simulation.	Quarterly
Password safety	Employees understand strong passwords, password reuse risks, and password manager benefits.	Policy briefing and practical demonstration.	Onboarding and annual refresher
Multi-factor authentication	Employees understand why MFA matters and how to respond to unexpected prompts.	Live demonstration or quick guide.	Onboarding
Device security	Employees know how to lock devices, report lost devices, and avoid risky public Wi-Fi use.	Checklist and awareness poster.	Biannual
Safe internet and email use	Employees avoid unsafe downloads, unauthorised software, and suspicious websites.	Interactive discussion and scenario-based examples.	Annual refresher
Data protection	Employees understand how to handle confidential, personal, and business-critical information.	Policy walkthrough and examples.	Annual refresher
Incident reporting	Employees know when, how, and to whom they should report suspicious activity.	Reporting flowchart and short quiz.	Onboarding and annual refresher

3. Suggested Training Agenda

Time	Topic	Activity
10 minutes	Introduction to cybersecurity	Explain why security matters to the organisation and employees.
15 minutes	Phishing and social engineering	Review examples of suspicious emails and messages.
10 minutes	Passwords and MFA	Demonstrate secure login practices and MFA prompt safety.
10 minutes	Device and data protection	Discuss locking screens, encryption, and safe handling of business information.
10 minutes	Incident reporting	Explain the reporting process and what details to include.
5 minutes	Knowledge check	Short quiz or discussion to confirm understanding.

4. Training Success Measures

- At least 90% of employees complete required cybersecurity training.
- Employees achieve at least 80% on the knowledge check.
- Phishing simulation failure rates reduce over time.
- Suspicious emails and incidents are reported more quickly.

Approval and Review

This document should be reviewed at least annually and after any major security incident, infrastructure change, or business process change. Updates should be approved by the responsible IT or management representative.
