

HARDWARE INVENTORY PLAN

Asset	Qty	Recommended Specifications	Business Justification
Workstation PCs	20	Intel Core i5 (12th Gen or newer), 16GB RAM, 512GB NVMe SSD, Windows 11 Pro / Ubuntu Linux Dual-Boot	Standard office workstations for Finance, HR, Sales, and Development teams. Provides reliable multitasking performance and future scalability.
Corporate Laptops	5	Intel Core i7, 16GB RAM, 512GB SSD, Windows 11 Pro, Wi-Fi 6, Webcam & TPM Security	Assigned to Executive Management and mobile employees requiring remote access, presentations, and hybrid work capabilities.
Business Router / Firewall	1	Enterprise-grade firewall router with VPN, IDS/IPS, VLAN support, and traffic monitoring	Provides secure internet connectivity, perimeter protection, VPN access for remote staff, and network traffic management.
Managed Network Switch	1	24-Port Gigabit Managed PoE+ Switch with VLAN and QoS support	Connects all wired devices including PCs, printers, NAS, and wireless access points while enabling secure internal segmentation.
Wireless Access Points (APs)	2	Dual-Band Wi-Fi 6 Enterprise Access Points with roaming support	Ensures stable and high-speed wireless coverage throughout the office for staff mobility and wireless devices.
Network Printers	2	Multifunction Laser Printers (Print/Scan/Copy) with Ethernet connectivity	Shared departmental printing and scanning solution to reduce printing costs and centralize document management.
NAS Storage Device	1	8TB NAS with RAID 1/5 redundancy, automated backup support, and cloud sync capability	Centralized file sharing, backup storage, and disaster recovery solution for critical business data.
Uninterruptible Power Supply (UPS)	2	1500VA Line-Interactive UPS with surge protection and battery backup	Protects critical infrastructure during load-shedding and power outages, ensuring operational continuity.

Notes

This hardware inventory was designed specifically for Ubuntu Innovations (Pty) Ltd, a 25-user technology startup based in Cape Town, South Africa. The recommendations support:

- Secure wired and wireless networking
- Shared storage and printing
- Backup and disaster recovery
- Scalability for future growth
- Protection against load-shedding and power instability
- Remote and hybrid work requirements
