PROFESSIONAL SUMMARY

Highly motivated and technically proficient Junior IT Support Specialist with hands-on experience designing and deploying end-to-end IT infrastructure, network architecture, and enterprise security frameworks. Proven ability to translate complex business specifications into robust, production-ready technical solutions, as demonstrated by engineering a full-scale IT deployment architecture for a 25-user technology startup. Adept at system administration across Linux and Windows environments, network engineering, and proactive infrastructure troubleshooting. Passionate about leveraging automation, rigorous technical problem-solving, and cloud-first strategies to maximize organizational uptime and systematically secure enterprise digital assets.

TECHNICAL SKILLS

Operating Systems & Admin:	Ubuntu Linux, Windows 10/11, Command-Line Interface (CLI), User & Permissions Management (chmod, chown, Linux ACLs, Security Groups).
Networking & Infrastructure:	Structured Network Topology, IP Addressing/Subnetting, Wi-Fi 6 Configuration, DHCP, DNS, Managed Layer 2/3 Switches, Business-Grade Firewalls/Routers.
Cybersecurity & Compliance:	Endpoint Detection & Response (EDR), Multi-Factor Authentication (MFA), Device Encryption, Patch Management Systems, Threat Mitigation (Phishing/Ransomware).
Data Protection & Storage:	Network-Attached Storage (NAS) Deployment, RAID Arrays, Lifecycle Backup Strategies (Incremental, Full, Archival), Disaster Recovery (RTO/RPO alignment).
Methodologies & Toolsets:	Agile/Scrum Frameworks, GitHub Version Control, VirtualBox Hypervisor, Technical Documentation, System Logs Analysis.

KEY TECHNICAL PROJECTS & CAPSTONE EXPERIENCE

Lead Infrastructure & Support Specialist (Capstone Project)

CAPACITI Tech Career Accelerator

2026

- Infrastructure Design:** Conducted a comprehensive business requirements analysis to provision enterprise-grade hardware, including corporate desktop fleets, executive management laptops, dual-band Wi-Fi 6 access points, high-throughput network printers, and dedicated Uninterruptible Power Supply (UPS) backups to secure high availability.
- Network Architecture:** Engineered a secure, resilient network topology mapping the ISP edge directly to a business-grade hardware firewall router and a 24-port Gigabit managed switch. Devised an optimized IP addressing and subnetting architecture partitioning network traffic across dedicated subnets (192.168.10.0/24 to 192.168.40.0/24) to securely segregate servers, corporate workstations, peripherals, and wireless networks.
- System Administration & Access Control:** Architected a granular shared directory framework structure (/ Company/) using a structured Linux file permission layer. Established department-specific security groups (such as mgmt_grp, dev_grp, and finance_grp) to rigidly enforce the principle of least privilege (PoLP) across organization data.

- **Business Continuity & Security:** Formulated an enterprise-grade data protection scheme combining automated daily incremental, weekly full, and monthly archival data backups, routed safely to an onsite 8TB RAID NAS cluster and mirrored onto secure cloud storage. Drafted a corporate Cybersecurity Policy regulating password complexity, global MFA mandates, and a robust 6-phase Incident Response Plan spanning from Detection through to Lessons Learned.

EDUCATION & PROFESSIONAL CERTIFICATIONS

Google IT Support Professional Certificate

Coursera / Google Verified Credential

Specialized Curriculum Components Completed:

- Technical Support Fundamentals (Customer-facing triage, hardware diagnostic workflows, and core ticketing paradigms)
- The Bits and Bytes of Computer Networking (TCP/IP model, routing protocols, DNS configuration, and network troubleshooting)
- Operating Systems and You: Becoming a Power User (Advanced CLI management, package installation, and file system configuration)
- System Administration and IT Infrastructure Services (Directory services, backup strategies, and infrastructure lifecycle automation)
- IT Security: Defense against the digital dark arts (Cryptographic protocols, identity management, vulnerability scanning, and threat mitigation)
