

Task 2 – Shared Folder Design

Tech Career Accelerator Week 2
Deliverable

1. Overview

A well-structured shared folder hierarchy supports efficient collaboration, simplifies permission management, and reduces the risk of unauthorised data access. The design below mirrors the organisational structure, placing each department's data within a dedicated sub-folder under a common root, with a public area available to all authenticated users.

2. Recommended Folder Structure

Path	Purpose and Access Group
/Company/	Root share — accessible by all authenticated users (traversal only)
/Company/Public/	General announcements and company-wide resources (all_staff – Read Only)
/Company/Finance/	Financial records, budgets, and reporting (finance_grp – Read/Write)
/Company/HR/	Personnel files, policies, and recruitment data (hr_grp – Read/Write)
/Company/Sales/	Client records, proposals, and sales reports (sales_grp – Read/Write)
/Company/Development/	Source repositories, documentation, and build artefacts (dev_grp – Read/Write)
/Company/Management/	Executive files, strategic plans, and board materials (mgmt_grp – Full Control)

Table 1 – Shared folder paths, purposes, and assigned groups.

3. Sub-Folder Conventions

Each top-level departmental folder should contain a standardised set of sub-folders to maintain consistency across the environment. Departments may request additional sub-folders through the IT service desk.

Sub-Folder	Recommended Contents
Archive/	Completed or superseded documents retained for reference.
Templates/	Approved document and spreadsheet templates.
Reports/	Generated reports and dashboards.
Working/	Documents currently under active development or review.

Table 2 – Recommended sub-folder structure per department.

4. Governance and Housekeeping

- Folder creation at the root level (/Company/) is restricted to system administrators only.
- Department managers are responsible for maintaining the contents of their assigned folder.
- Files in Archive/ sub-folders are subject to a seven-year retention policy in line with regulatory requirements.
- Storage quotas will be applied per departmental folder to prevent unchecked growth.
- Folder permissions are inherited from the parent unless explicitly overridden and documented.
